PLEASE DESCRIBE THE TYPE OF WORK TO BE COMPLETED

(Be as detailed as possible to avoid having to provide additional information)

Provide a detailed description of the proposed project:

The project area is within WRIA 45 in the Lower White Pine Reach of Nason Creek as defined in the Lower White Pine Reach Assessment (USBR 2009). The replacement of the barrier culverts at RM 0.4 with a bottomless arch structure would improve Chinook and Steelhead access to 1.6 miles of potential spawning habitat, of which the first 0.3 miles is low gradient rearing habitat. The goal of this action is to increase access to rearing habitat steelhead in Nason Creek and the Wenatchee Subbasin. This project will complement the larger Nason Creek Lower White Pine (LWP) Reconnection that will reconnect 14.9% of the Upper Nason Creek Basin including the reestablishment of hydraulic connectivity to the Coulter Creek drainage to the mainstem Nason Creek.

Describe existing project site conditions.

The land use is private property. Coulter Creek is a tributary of Nason Creek which is a Category 2 watershed in the Wenatchee Subbasin and contains major spawning areas for ESA listed spring Chinook salmon and steelhead and is a bull trout core area (UCRTT 2007).

Describe any proposed ground disturbing activities. That is, will a tool(s) be used to move earth (soil, rock, gra
Excavator to remove and replace culvert

Will buildings be altered or demolished? If so please complete a DAHP Determination of Eligibility EZ2 form for each building affected by the proposed project and attach the form to your project in PRISM. <http://www.dahp.wa.gov/pages/Documents/Sites.htm>
